WEATHER OF CONCERN

Weather of Concern

- Stationary high pressure over the Western U.S. will produce unseasonably hot temperatures and thunderstorms over portions mountainous/desert areas of California.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

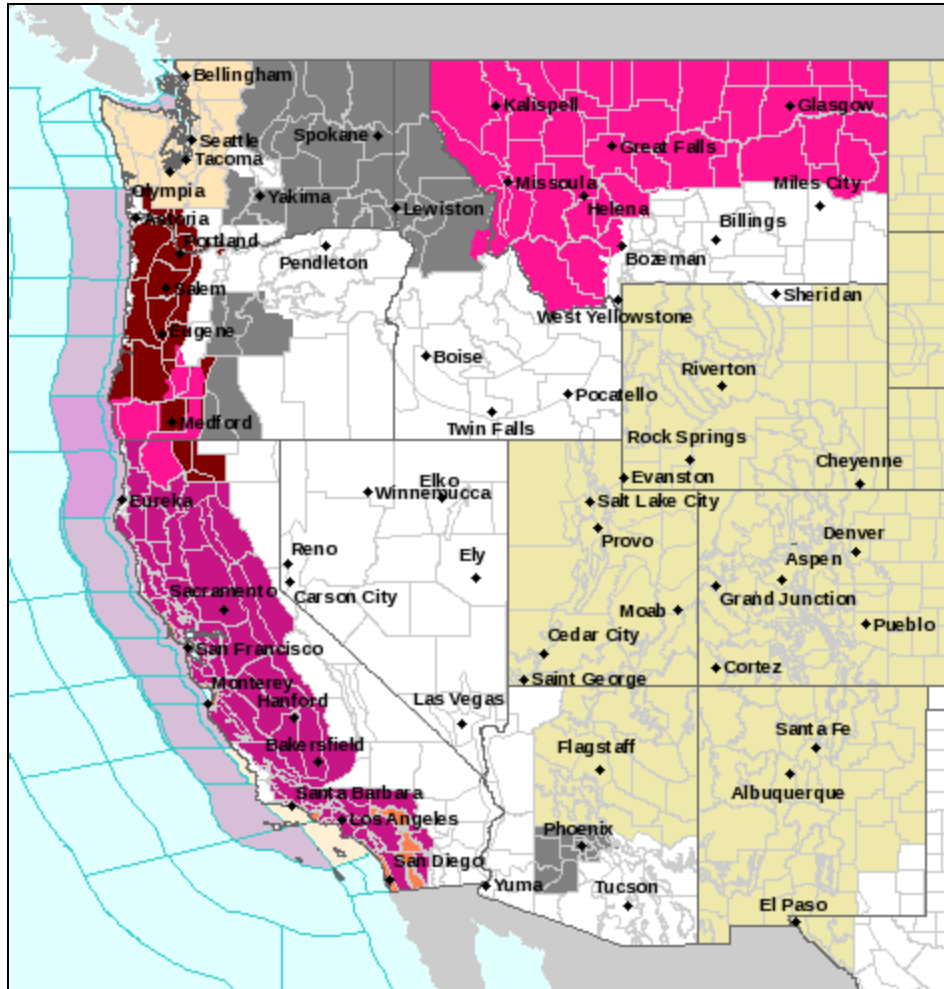

NORTHERN CALIFORNIA

A low pressure trough over the region will move east of the area by midday today. Otherwise, no thunderstorms are in the forecast through Saturday. Strong high pressure will follow and produce very hot and dry weather with poor overnight relative humidity (RH) recovery today through the weekend. North-Northeast/Offshore winds will gust to 20-25 mph in wind-prone areas in the north from the northern Cascade-Sierra foothills to the coast during nights and mornings through early tomorrow, enhancing the hot and dry conditions. The stable conditions under the strong high will also lead to poor smoke dispersion and poor air quality in canyons and valleys near active fires. The marine layer will be shallow and only areas along the immediate coast will get relief from the very hot temperatures. There is a chance that subtropical moisture will move through Southern California and up toward Northern California late in the weekend or early next week and produce isolated thunderstorms.

SOUTHERN CALIFORNIA

Storms are occurring in the Sierras and the desert sides of the Angeles, San Bernardino and Cleveland National Forests. The storms will produce gusty winds, but little rainfall, as they move northeast at 10 mph. After the high pressure area over the Great Basin weakens, another high pressure area is expected to develop over Central and Northern California today and into the weekend. This will serve to focus the hottest temperatures over the northern two-thirds of the state throughout the holiday weekend. The San Joaquin Valley and Sierra Foothills may experience record heat with temperatures getting close to 112 in the hottest locations by Saturday. In general, fewer storms are expected tomorrow into the weekend with just a handful of storms possible over the desert and adjacent areas of the Southern California mountains. Little, if any, convection is expected in the Sierras for tomorrow and beyond. Temperatures over Southern California may edge downward a bit this weekend, but overall, temperatures will remain 10-15 degrees above normal through at least the middle of next week. More significant cooling may occur the weekend of September 9th.
